how to put youtube on repeat

Published: September 3, 2026 | Index ID: #-

Introduction

Watching a favorite music video, a calming nature clip, or a motivational talk on YouTube can be a great way to relax or stay focused. Sometimes the best experience is to let the video play on a continuous loop, so you never have to pause, click, or wait for the next segment. Whether you're a student studying with background music, a gamer looking for ambient soundscapes, or simply someone who enjoys a particular YouTube channel, knowing how to put YouTube on repeat can save time and keep your workflow smooth.

This guide covers every method you'll need to loop a YouTube video or playlist—directly within the platform, using browser extensions, or through creative workarounds. We'll walk through step by step instructions, highlight the pros and cons of each technique, and give you tips for troubleshooting common hiccups. By the end, you'll be able to create seamless, endless playback on any device, whether you're on desktop, mobile, or using a smart TV.

Why Do You Want to Repeat a YouTube Video?

There are many scenarios where looping a video can enhance your experience:

- Studying or working – Background music or white noise videos can help maintain focus without distracting you with new content.
- Relaxation and meditation – Calming nature scenes or guided meditation videos provide a steady rhythm that can ease stress.
- Gaming and streaming – Players often use looping music tracks to create immersive atmospheres during long sessions.
- Content creation – Filmmakers and podcasters may need a continuous audio source for editing or live streams.
- Accessibility – Repeating a video can help people with certain learning or visual needs by providing consistent visual cues.

Understanding your goal helps you choose the right looping method and ensures the experience is smooth and reliable.

Built In YouTube Features for Looping

Looping a Single Video on Desktop

YouTube's web player offers a simple way to loop a single video. The feature is hidden behind the "More" button, but it's easy to locate once you know where to look.

1. Open the video you want to loop in your web browser.
2. Click the three dots icon (More) located below the video, next to the share button.
3. Select Loop from the dropdown menu. The button will turn green to indicate the video is set to repeat.
4. Enjoy the endless playback. To stop looping, simply click the Loop button again.

Looping a Single Video on Mobile

On the YouTube mobile app, the looping feature is accessible through the video's settings menu.

1. Play the video on your Android or iOS device.
2. Tap the screen to bring up the video controls, then tap the three dot menu in the top right corner.
3. Choose Loop from the list. The icon will turn green.
4. To turn off the loop, tap the Loop option again.

Note that the looping button may appear as a small circular arrow. If you're using an older app version, you might need to update to see the feature.

Looping Entire Playlists

For longer listening sessions, creating or using a playlist that repeats automatically is often more convenient.

1. Navigate to the playlist you want to use.
2. At the bottom of the playlist page, click the Repeat icon (two arrows forming a circle). The icon will turn blue when active.
3. All videos in the playlist will play continuously. The repeat function restarts the playlist once the last video ends.
4. If you want to loop only the current video, pause the playlist and use the single video loop option described earlier.

Using Auto Play to Create a Repeat Effect

Auto Play is another built in feature that can approximate a loop when combined with playlist settings.

- Enable Auto Play by toggling the switch located next to the video title.
- Create a playlist with a single video and turn on Repeat.
- With Auto Play active, the video will automatically restart after finishing, ensuring a seamless loop.

Browser Extensions and Third Party Tools

Popular Extensions for Chrome and Firefox

Extensions can provide more granular control over looping, such as setting custom start and end times or looping a specific segment.

- Looper for YouTube – Adds a dedicated loop button directly on the video player.
- YouTube Video Loop – Allows you to set start/end points for a loop.
- Auto YouTube – Automates playback and offers repeat options for both videos and playlists.

To install, visit the Chrome Web Store or Firefox Add ons page, search for the extension name, and click "Add to Chrome" or "Add to Firefox." Once installed, you'll see a new icon or button in the YouTube interface.

Using Bookmarklets to Enable Looping

A bookmarklet is a small JavaScript snippet saved as a bookmark. When clicked, it injects code into the current page to add loop functionality.

1. Drag the following link to your bookmarks bar: Enable YouTube Loop
2. While watching a video, click the bookmarklet. A loop button will appear on the video player.
3. Click the button to start looping. Click again to stop.

Bookmarklets are lightweight and work across browsers, but they may be blocked by some corporate security settings.

Third Party Sites and Apps

Several websites allow you to paste a YouTube link and get a looping embed. Examples include:

- Y2Mate – Offers video download and loop options.
- LoopTube – Simple interface to play videos on repeat.
- Dedicated mobile apps for Android and iOS that provide a built in loop feature.

While convenient, always verify that the site complies with YouTube's terms of service and does not host copyrighted material unlawfully.

Keyboard Shortcuts and Quick Access Options

Keyboard shortcuts can speed up the process of toggling repeat, especially on desktop.

- l – Toggles the Loop button on the YouTube player.
- Shift + l – Toggles Auto Play.
- p – Pauses or resumes playback.
- j/k – Rewind or fast forward 10 seconds.
- f – Toggles full screen mode.

These shortcuts work on most browsers and are supported on both Windows and macOS. They are especially handy when you're multitasking or working with multiple tabs.

Workarounds When Looping Is Not Available

Creating a Custom Playlist

If the loop button is missing—perhaps due to an older app version—you can create a playlist containing only the video you wish to repeat.

1. Click the Save button below the video.
2. Choose Create new playlist and name it.
3. Set the privacy to Unlisted if you don't want it visible to others.
